

PROJECT / Networked audiovisual media technologies II

VISNET II

Main Objective:

The main goal of VISNET II is the provision of a working environment with appropriate integration activities and research infrastructure that will ease and stimulate the interaction and cooperation among European researchers and institutions with recognized excellence in various fields embraced by audiovisual networking technologies. The fulfilment of this objective will promote and contribute to the advances of research in this area and ultimately improve the quality and quantity of research results. Due to the high commitment of this NoE in conducting extensive dissemination activities, results will easily span across its borders, thus benefiting the whole scientific and technological communities.
