

**PROJECT / Quality of Service Evaluation in the
Internet Broadband Access: ADSL, Cable and 3G
Mobile Networks (Avaliação da qualidade de
Serviço de Acesso à Internet de Banda Larga:
ADSL, Cabo e Rede Móvel 3G)**

AQSAI

Main Objective:

The project centers in the analysis of an extensive set of data gathered at selected Internet broadband residential access points.

The quality perceived by clients is compared for different service agreements for the relevant ISP's, taking into account the geographical location, the destination target, the hour of the day and the day of the week. Requirements for future measurements are extracted from the data analysis.
